

# Ophthalmic Photographer

## Position Overview

Operates diagnostic equipment and performs a variety of technical angiography procedures. Provides patient orientation, procedure explanation, and pre and post diagnostic care to completion of test.

## Key Responsibilities

- Performs angiography exams on patients according to the specific departmental procedure protocols.
- Prepares equipment ensuring that equipment is operational, safe and functioning according to diagnostic standards
- Ensures the patient orientation, patient preparation and patient teaching is provided prior, during and following the test completion.
- Reviews the physician order to verify the type of diagnostic test requested and that the indication for the procedure is consistent.
- Provides specific diagnostic test information to the patient ensuring that the patient is aware of the diagnostic test involvement.
- Positions the patient for the examination and selects the specific equipment presets and modifies the settings to ensure that optimal image is obtained.
- Performs exams in an accurate and timely manner without hindering patient-to-doctor wait time.

## Other Responsibilities

- Problem-solves equipment failure and imaging quality and contacts service representatives of CES regarding equipment problems.
- Ensure that daily equipment and room maintenance are performed during/after each procedure, and that special precautions and measures are performed to ensure infection control standards.
- Complete all clinical supply inventory, ensuring that each diagnostic room is complete with the necessary supplies required to perform the procedure.
- Attend training, continuing education, and maintain up-to-date certifications.
- Assist with training of newly hired Angiographers.
